Szemerédi's Theorem via ergodic theory Structure of characteristic factors Leibman's Theorem

### Furstenberg's proof of Szemerédi's Theorem

Szemerédi's Theorem can be deduced from a recurrence statement in ergodic measure preserving systems.

Theorem (Furstenberg's Correspondence Principle, 1977)

Let A be a set of integers of positive upper density. Then there exist an ergodic measure-preserving system  $(X, \mathcal{X}, \mu, T)$  and a set  $E \in \mathcal{X}$  with  $\mu(E) = d^*(A)$  such that

$$\mu(T^nE\cap\cdots\cap T^{kn}E)\leq d^*((A+n)\cap\cdots\cap (A+kn))$$

for all integers  $k \ge 1$  and all  $n \in \mathbb{Z}$ .

イロン イヨン イヨン イヨン

Szemerédi's Theorem via ergodic theory Structure of characteristic factors Leibman's Theorem

### Furstenberg's proof of Szemerédi's Theorem

#### Theorem (Furstenberg Multiple Recurrence, 1977)

Let  $(X, \mathcal{X}, \mu, T)$  be an ergodic measure-preserving system, and let  $f \in L^{\infty}(\mu)$  Then

$$\liminf_{N\to\infty}\frac{1}{N}\sum_{n=1}^N\int f(x)T^nf(x)\ T^{2n}f(x)\ \dots\ T^{kn}f(x)d\mu(x)$$

is strictly greater than zero.

Szemerédi's Theorem via ergodic theory Structure of characteristic factors Leibman's Theorem

### Furstenberg's proof of Szemerédi's Theorem

#### Theorem (Furstenberg Multiple Recurrence, 1977)

Let  $(X, \mathcal{X}, \mu, T)$  be an ergodic measure-preserving system, and let  $f \in L^{\infty}(\mu)$  Then

$$\liminf_{N\to\infty}\frac{1}{N}\sum_{n=1}^N\int f(x)T^nf(x)\ T^{2n}f(x)\ \dots\ T^{kn}f(x)d\mu(x)$$

is strictly greater than zero.

In order to understand multiple ergodic averages, look at so-called "characteristic factors".

・ロン ・回と ・ヨン・

Szemerédi's Theorem via ergodic theory Structure of characteristic factors Leibman's Theorem

### Characteristic factors

#### Definition

We say a factor Y of X is *characteristic* for the average

$$\frac{1}{N^d} \sum_{n_1, \dots, n_d=1}^N T^{L_1(n)} f(x) \dots T^{L_m(n)} f(x) d\mu(x)$$

if and only if the difference with

$$\frac{1}{N^d}\sum_{n_1,\ldots,n_d=1}^N T^{L_1(n)}\mathbb{E}(f|Y)(x) \ldots T^{L_m(n)}\mathbb{E}(f|Y)(x)d\mu(x)$$

tends to 0 in  $L^2(\mu)$ .

## Host-Kra norms

#### Definition

For  $f \in L^{\infty}(\mu)$  and  $k \in \mathbb{N}$ ., we define the Host-Kra semi-norms as

$$|||f|||_k := \left(\int_{X^{2^k}} f \otimes \cdots \otimes f d\mu^{[k]}\right)^{1/2^k}$$

・ロン ・回と ・ヨン ・ヨン

Szemerédi's Theorem via ergodic theory Structure of characteristic factors Leibman's Theorem

## Host-Kra norms

#### Definition

For  $f \in L^{\infty}(\mu)$  and  $k \in \mathbb{N}$ ., we define the Host-Kra semi-norms as

$$|||f|||_k := \left(\int_{X^{2^k}} f \otimes \cdots \otimes f d\mu^{[k]}\right)^{1/2^k}$$

These seminorms are nested, in the sense that they satisfy

$$|||f|||_1 \le |||f|||_2 \le \cdots \le |||f|||_k \le \cdots \le ||f||_{\infty},$$

・ロン ・回と ・ヨン・

Szemerédi's Theorem via ergodic theory Structure of characteristic factors Leibman's Theorem

## Host-Kra norms

#### Definition

For  $f \in L^{\infty}(\mu)$  and  $k \in \mathbb{N}$ ., we define the Host-Kra semi-norms as

$$|||f|||_k := \left(\int_{X^{2^k}} f \otimes \cdots \otimes f d\mu^{[k]}\right)^{1/2^k}$$

These seminorms are nested, in the sense that they satisfy

$$|||f|||_1 \le |||f|||_2 \le \cdots \le |||f|||_k \le \cdots \le ||f||_{\infty},$$

and can also be defined inductively via the formula

$$|||f|||_{k+1}^{2^{k+1}} = \lim_{N \to \infty} \frac{1}{N} \sum_{n=0}^{N-1} |||f \cdot T^n f|||^{2^k}.$$

# Counting arithmetic progressions

#### Fact

Fourier analysis is not sufficient for counting longer progressions

For example, the following set is uniform but contains many more than the expected number of 4-APs.

$$A = \{x \in \mathbb{Z}_N : |x^2| \quad \mathsf{small}\}$$

$$x^{2} - 3(x + d)^{2} + 3(x + 2d)^{2} - (x + 3d)^{2} = 0$$

This corresponds to the Furstenberg-Weiss example in ergodic theory.

Szemerédi's Theorem via harmonic analysis Inverse theorems and decompositions True complexity for square-independent systems

# Uniformity norms

### Definition (Gowers, 2001)

For any positive integer  $k \ge 2$ , and any function  $f : G \rightarrow [-1, 1]$ , define the  $U^k$ -norm by the formula

$$\|f\|_{U^k}^{2^k} := \mathbb{E}_{x,h_1,\dots,h_k \in G} \prod_{\omega \in \{0,1\}^k} f(x + \sum_i \omega_i h_i).$$

イロン 不同と 不同と 不同と

Szemerédi's Theorem via harmonic analysis Inverse theorems and decompositions True complexity for square-independent systems

# Uniformity norms

### Definition (Gowers, 2001)

For any positive integer  $k \ge 2$ , and any function  $f : G \rightarrow [-1, 1]$ , define the  $U^k$ -norm by the formula

$$\|f\|_{U^k}^{2^k} := \mathbb{E}_{x,h_1,...,h_k \in G} \prod_{\omega \in \{0,1\}^k} f(x + \sum_i \omega_i h_i).$$

This definition corresponds to that of the semi-norms  $||| \cdot |||_k$  in ergodic theory.

イロン 不同と 不同と 不同と

Szemerédi's Theorem via harmonic analysis Inverse theorems and decompositions True complexity for square-independent systems

# Uniformity norms

### Definition (Gowers, 2001)

For any positive integer  $k \ge 2$ , and any function  $f : G \rightarrow [-1, 1]$ , define the  $U^k$ -norm by the formula

$$\|f\|_{U^k}^{2^k} := \mathbb{E}_{x,h_1,\dots,h_k \in G} \prod_{\omega \in \{0,1\}^k} f(x + \sum_i \omega_i h_i).$$

This definition corresponds to that of the semi-norms  $\|\cdot\|_k$  in ergodic theory. In particular,

$$\|f\|_{U^2}^4 = \mathbb{E}_{x,a,b\in G}f(x)f(x+a)f(x+b)f(x+a+b) = \|\widehat{f}\|_4^4.$$
